To whom it may concern,

I am thrilled to apply for OpenTable's Software Engineer(Frequency Team) position. I am a software engineer with **strong CS fundamentals** and **JavaScript expertise** with a proven track record of delivering value in fast-paced, international startups. Here are **two** reasons why I'd be a great fit for a seat at OpenTable :

On the technical side, I'm equipped with strong CS fundamentals in *data structures, software design* and *algorithms*, as well as two years of industry experience as a software engineer developing web apps using front-end technologies([HTML/CSS/JavaScript/React/Node.js](#)). I take pride in writing test-driven, clean code and am well-versed in writing unit tests, optimizing application performance, and setting up build tools([Gulp](#), [Webpack](#), [CSS preprocessors](#)) for front-end workflow.

I'm currently a front-end engineer at [SeniorsAndYouth](#), where we hire senior citizens over 55 years old as trained Korean language tutors and connect them with students worldwide. What drives me as a software engineer is a desire to build things that empower people and bring about meaningful social impact. I truly believe OpenTable's product empowers restaurants and diners worldwide, and am excited to help innovate the way people dine out.

Thank you for your time and consideration, and I look forward to hearing from you at your earliest convenience.

Sincerely,

Alex Kim
