To whom it may concern,

I am thrilled to apply for Box's Software Engineer, Front-End position. I'm a front-end engineer with **JavaScript expertise** and **strong CS fundamentals** with a proven track record of delivering value in fast-paced, international startups in San Francisco, Medellin and Seoul.

On the technical side, I'm a lover of JavaScript in all forms and quirks (vanilla, React, ES6, you name it) equipped with strong CS fundamentals (data structures and algorithms) and an understanding of the full web technology stack (HTTP-1/2, caching, asset loading). I take pride in writing test-driven, clean code and am well-versed in writing unit tests, optimizing application performance, and setting up tooling (*Gulp, Webpack, CSS preprocessors*) for automating front-end workflows. My latest side project, **Backtracker**, is an algorithm visualization/learning tool built in React.js that displays step-by-step visualizations of popular recursive algorithms.

What drives me as a software engineer is a desire to build things that empower people, and businesses and bring about meaningful social impact. I love Box's product and mission to deliver an intuitive, incredible experience for customers through beautiful software. As a former military veteran, I enjoy and thrive in fast-paced, collaborative team settings - I'm excited about the opportunity to be a part of Box's dynamic, collaborative culture as well.

Thank you for your time and consideration, and I look forward to hearing from you at your earliest convenience.

Sincerely,

Alex Kim
